1. INTRODUCTION

1.1 Project Description

> The **Student Placement Management System** is a web-based application designed to simplify and automate the placement process for colleges. The system provides an efficient platform for **students, administrators, and companies** to interact and manage placement-related activities in a structured manner.

> This system eliminates manual work and improves communication between all stakeholders involved in campus recruitment

> This platform consists of two primary panels:

- Admin Panel
- Student Panel

1.1.1. Admin Panel

> The Admin Panel is accessible only through a secure admin login. It provides complete control over system data and overall placement operations.

Admin panel functionalities include:

1. Student management

- View the list of all registered students
- Add new student details
- Update existing student information
- Delete student records if required

2. Company management

- View all registered companies
- Add new company details
- Update company information
- Delete companies from the system

3. Job management

- View all job postings
- Add new job opportunities with details (title, salary, eligibility, description, etc.)
- Update existing job information

- Delete job postings

4. Application management

- View all job applications submitted by students
- Track application status
- Delete invalid or duplicate applications

5. Placement Tracking

- Monitor selected students
- Maintain placement records
- View placement statistics

6. Contact/Inquiry Management

- View all user inquiries or messages
- Delete resolved or unnecessary queries

1.1.2. Student Panel

> The Student Panel is accessible after login, offering all student-level features related to placement activities.

Student functionality includes:

1. Job Search & Viewing

- Search available jobs using filters (company, role, eligibility, location, etc.)
- View detailed job information (Company name, salary, eligibility criteria, description etc.)

2. Job Application

- Students can apply for available jobs
- Application includes student details, resume, and job information

3. Application Tracking

- View all applied jobs
- Track application status (pending, selected, rejecte)

4. Profile Management

- Update personal details

5. Contact Feature

- Students can send inquiries or messages to admin

1.2. Project profile

Student Placement Management System	
Project title:	Student Placement Management System
Frontend:	Angular
Backend:	Node, Express, MongoDB
Browser:	Chrome
Plateform:	VS code, Cursor, MongoDB
Documentation Tool:	MS Word
Internal guide:	Ashish Sir
Submitted to:	Ashish Sir

2. OBJECTIVES

The primary objective of the Student Placement Management System is to provide a streamlined, user-friendly, and efficient platform for managing campus placement activities. The system aims to improve the overall experience for both administrators and students by offering smooth navigation, secure access, and reliable data management.

The key objectives of the system include:

1. To simplify job searching and application process

- Provide students with an easy-to-use interface for searching and viewing job opportunities
- Enable quick and hassle-free job application process

2. To enable efficient management for administrators

- Allow admins to add, update, and delete student, company, and job details easily
- Ensure proper maintenance of placement data with real-time updates

3. To provide secure login and registration

- Offer secure authentication for both admin and student panels
- Protect user and system data through proper account management

4. To manage job applications and student records

- Allow students to apply for jobs through the system

- Enable admins to view, track, and manage all job applications

5. To enhance user experience with a responsive design

- Make the system fully responsive and user-friendly
- Ensure all features work smoothly across various devices

6. To reduce manual work and digitize the placement process

- Eliminate paper-based or manual placement activities
- Provide automated, efficient, and error-free data handling

7. To improve communication between students and admin

- Provide a contact/inquiry feature for students
- Help admins respond effectively to queries and manage requests
